

Case A: Invoking Skill Leads to Success (invoke_chosen)

Task: clean some apple and put it in microwave | Fork at step 4 (holding apple 2)

Source: DPO training data (invoke_chosen, ep_0146, clean_object). After skill: $\bar{H}(\text{invoke})=0.340$ vs $\bar{H}(\text{skip})=0.0001$. Invoke forces re-planning; skip follows prior trajectory.
